

MICHAEL GALLO

SENIOR SOFTWARE ENGINEER

Arlington, VA • 732-742-7313 • me@michaelgallo.dev • [LinkedIn](#) • <https://michaelgallo.dev/>

SUMMARY

Senior Software Engineer and technical lead building backend platforms and developing tools in Go and Python. Experience spans a federated GraphQL platform serving a major bank and e-commerce automation supporting 400% YoY company growth. Former business owner with hands-on experience in architecture, delivery, and mentoring.

TECHNICAL SKILLS

Programming Languages: Go, Python, Bash

Backend: GraphQL, gqlgen, Red Hat Drools

Cloud & Infrastructure: AWS (Lambda, Fargate, DynamoDB, Secrets Manager), Docker, Terraform, Linux

DevOps & Tooling: Jenkins, CI/CD, SonarQube, HashiCorp Vault

WORK EXPERIENCE

Accenture PLC

Arlington, VA - Jul 2021 – Present

Tech Lead - GraphQL Data Mesh Team | Apr 2026 – Aug 2026

- Lead a 5-person engineering team on technical delivery for a production Go/GraphQL data platform on AWS Lambda/Fargate serving a top-15 bank (25M daily requests, 13 consuming applications).
- Onboarded a new engineer who delivered a feature in their first sprint and presented it to project leadership.
- Migrated internal developer documentation from VuePress to Hugo, replacing an unsupported toolchain and aligning documentation tooling with the team's Go ecosystem.

Senior Software Engineer - GraphQL Data Mesh Team | Aug 2023 – Apr 2026

- Built a Python CLI prototype in two weeks to generate GraphQL subgraphs; a director-led demo secured the bank's core banking organization as an internal customer and expanded account scope.
- Developed a code-generation framework that produces Go services from declarative GraphQL definitions using Apollo Connectors.
- Designed and implemented a Jenkins testing pipeline for 4 Go repositories; greatly reduced integration issues, freeing up ~20% more time for new feature development.
- Created and implemented acceptance testing strategy for code generation tools to allow for repo-level testing, continuous integration, and compliance with enterprise requirements.
- Migrated secrets from HashiCorp Vault to enterprise-preferred AWS Secrets Manager.
- Designed a canary strategy for migrating from a legacy GraphQL server to a federation-compatible implementation.
- Mentored three engineers in Go and conducted four technical interviews for senior Go candidates.
- Delivered 3 training sessions to over 100 new joiners and account members, improving onboarding efficiency and knowledge transfer; topics covered Core Go concepts, an enterprise performance testing tool, and an enterprise acceptance testing tool.
- Consistently ranked among top-performing consultants on a 500-person account, earning 7 quarterly excellence awards in a period of 8 consecutive quarters.

Software Engineer - Drools Rules Engine Team | Sept 2021 – Jan 2023

- Designed, developed, and deployed a Dockerized Red Hat Drools-based fraud detection rules engine for a top-15 bank; reduced overhead by enabling business analysts to implement business logic that would traditionally require costly developers.
- Served as Decision Model and Notation (DMN) SME. Trained client leadership on DMN standard, enabling Accenture to successfully hand off rules engine to our client.
- Won team of the year award as part of a 10-person team across the entire bank.

JD Sports WM

Edison, NJ - Feb 2019 – Jul 2021

Python Developer

- Built Python reporting and sourcing automation as the company's first employee and sole developer, supporting 400% YoY company growth.
- Built Python sales-reporting tools that cut report-generation time by nearly four days, enabling daily reporting and supplier restocking instead of a monthly cycle.
- Built wholesale product-screening software that filtered out 95% of unsuitable SKUs and increased processing capacity 10x.

Batcom LLC

Parlin, NJ – May 2014 – Jul 2024

Founder & Owner

- Built a children's kitchen products brand that earned 2,500+ Amazon reviews; managed sourcing, logistics, accounting, advertising, and marketing.
- Sold the company in 2024

Projects

simpleical

<https://github.com/Michael-Gallo/simpleical>

- Engineered an iCalendar parsing library that processes files in roughly half the time of existing Go parsers while using about one-third of the memory allocations.
- Documented exported APIs with Go doc comments and published tests and usage examples.
- Implemented entirely using Go's standard library.

CERTIFICATIONS

Claude Certified Architect - Foundations

AWS Certified Developer Associate
